Mozilla Thunderbird, also known as Mozilla Thunderbird Email (previously known as Mozilla Sunbird) is a free application for managing your email. The latest stable version is 6.0.1. The program can receive, send, forward and manage email messages. You can use it to read and reply to email messages. It also includes a web client with many other useful features. Mozilla Thunderbird can automatically download messages from most popular email servers. It also supports all kinds of Internet IMAP and POP3 email accounts (including IMAP and POP3 mailboxes). Mozilla Thunderbird is simple to use. You can start the program without the need for installation. You also need to install the software on the computer that you use as your default mail reader. You can use a third party email client to open the messages but, in this case, Thunderbird cannot fetch the messages from the server. Another advantage of Mozilla Thunderbird is that it is possible to export the messages to other file formats such as MSG, HTML and MHTML. You can also print email messages. Mozilla Thunderbird can be used as a mail client and also as a web browser. With the support of "send-as", you can download messages from your email account and send them to others. Another interesting feature is the new group email application. With the support of "reply-all", you can send emails to multiple users. This feature can be very useful in organizing and conducting meetings. It is possible to attach files to the messages, such as voice recordings, video, images and other files.
