It does nothing special. But I need to insert the content of another file into the document. Specifically, I need to scan a URL from another document and use it as the text of a hyperlink. I found the iTextSharp which supposedly allows you to insert content from another file into an existing PDF document. However, whenever I try this, I get an error saying that "cannot find reference to a token in my own code." Here is my

A: There are a couple of things here that need to be clarified: 1) You can not directly add a "fake" RAM partition to a "real" SSD drive. There is a virtual hard drive designed specifically to emulate the effects of having additional "memory" which can be installed in a computer with a standard hard drive. For example, this product uses a PM 2000 SSD drive (currently the only SSD that I am aware of that has a PCI-X interface is this one: and can be purchased here: 2) Your PCIe SSD drive supports a 4096 bytes alignment requirement for the speed you are trying to achieve. Look here for more detail: 3) You will need a software emulator of a 4GB hard disk to use RAMDisk. You can either purchase this product here: or read about it here: I have used it and it works very well. Q: How to enforce uniqueness of data using codeigniter I am using codeigniter.
