the growth of endometrial cancer cells in nude mice. Nine ovariectomized female athymic nude mice (nu/nu strain) were injected sc with endometrial cancer cells (AH-1; Ishikawa cells) to establish an experimental model. The mice were then divided into two groups: (1) a control group (n = 4) and (2) an experimental group (n = 5) in which the mice were given subcutaneous injections of estradiol (E2) and medroxyprogesterone acetate (MPA) for 10 days. E2 and MPA were combined in the experimental group in attempt to improve sensitivity to anti-cancer drugs. The experimental group mice were inoculated sc with 1×10^7 cells of E2 and MPA-treated AH-1 cells, whereas the control group mice were inoculated with AH-1 cells alone. The growth of the transplanted AH-1 cells was monitored through visual observation, measurement of tumor size and determination of the tumor volume.

Estradiol
