## JumpBox For The Joomla! 1.0.x Content Management System Download

JumpBox is a quick and easy method to install Joomla! on your site. It is easy to download and install, and once running, you can update through the web interface without powering down your site. JumpBox supports the Joomla! 1.0.x system and migration tool. If you are already running Joomla! 1.0.x, Joomla! 2.5.x and Joomla! 3.x on your site using the standard Content Manager, you can upgrade your site to the latest Joomla! versions. Or if you just need to create a quick Joomla! 1.0.x website and never want to use it or touch it again, JumpBox is perfect for you! * I now host Zipped and Pre-zipped JumpBox for Joomla! 1.0.x on sourceforge. Features: I have left a lot of features out, because that is not the focus of this product. Please see the (currently empty) README file for a list

of features. Special Features: - One click installation of Joomla! for Joomla! 1.0.x - Runs in the background and does not power down your site - Backup and Restore - Upgrade tool - Joomla! 1.0.x and Joomla! 2.5.x (Joomla! 3.x is unsupported) - Runs on Windows, Linux or Solaris - Runs on both 32 and 64 bit platforms Installation: 1. Download the latest version from either the mirror to your host. 2. Run the installer. 3. Follow the prompt. 4. When prompted, select "Install Joomla!" 5. Follow the prompt and submit. Your JumpBox is installed and fully operational. You can log in to it via the web GUI. From here, you can make any changes to the configuration of your JumpBox, such as changing the title and description, installing extensions, changing the admin password and permissions, or creating new users. Once you have completed these tasks, you can access the Backup/Restore page by selecting Backup => Restore. Updates: You can update to Joomla! versions 1.1.x and 2.5.x if you have a recent backup. You can update to Joomla! 3.0.2 and later versions if b7e8fdf5c8

## What's New In?

- Exclusive optimizations for Joomla! 1.0.x - New API! - Partially auto-configured with username and password - All configuration based on CLOB type fields - 32bit and 64bit support - Runs from a ramdisk, supports archiving the state of the JumpBox to NFS, Windows File Shares and Amazon S3 * OTRS is an Open Source Bug Tracker, normally used to track the bugs in the OTRS bugzilla. * These free plugins are highly recommended to get the most out of OTRS system. OTRS is an open source Bug Tracking System (BTS) which is powered by the PHP Framework Laravel. It provides a fully RESTful API, well structured data models, group permissions and other features. We use OTRS to manage our new bugs and will be integrate it in the future releases of our products. Joomla!® is the world's most popular Open Source content management system (CMS) with more than 240,000 downloads to date. It is a modular CMS based on PHP that is easy to use and maintain. Joomla! is free, open source software, released under the GNU General Public License version 2 or later. Mini-BCSD is a free, open source suite of software tools for software development. It offers powerful build-tools, useful libraries, an extensible XML-based configuration system and a built-in web server that runs in the UNIX and Linux® operating system. It provides an environment for rapid development of small software utilities. Mini-BCSD is not an application development framework, and is not supposed to be an application server. It's not a web server either, although it can act as one if you want it to. It can be used with any software that runs in the UNIX® and Linux operating system. The VLAP Automatic Platform is a very fast growing Javascript front end for XenApp and XenDesktop. It is very easy to use and reliable, so it is suitable for all types of helpdesk applications. By using it, you will be able to distribute the workload among several users and drastically improve performance. jQuartz is a ready-to-run application framework for Java that provides a rich set of functionality. To do this, it hides a lot of the complexity of the underlying Java technology and provides ready-to-run application

components that allow the programmer to concentrate on business
