related data efficiently Ok so I have 2 tables linked by a foreign key in one table. The first table is called account. Table columns ID (auto) Account (foreign key to account) Details (related table) ID (auto) Name Something_Else etc etc Table 2 is called details. Table columns ID (auto) Account (foreign key to account) Date (related table) ID (auto) Phone Email etc etc Now each time the details table is updated all of the related

data gets updated. This seems to be very inefficient as each of the rows in the details table have to get updated in order to change the record in the account table. I would have thought that in this situation I would have created a view on the account table that would have had a composite FK to all of the related columns. Is this the better way of doing this? A: You should use the FK in the detail table for efficient inserts and updates. If for

some reason you want to have multiple copies of each row of the detail table (which, really, is your main problem), you can use another table to act as a lookup table. Create that table with a composite FK of the Account and Detail tables. When you insert or update a detail row, reference the new row in the table you've created, instead of the existing detail row. ----- PhotoS is an application that allows you to transform digital photos in an easy-to-use application. It contains a wide range of tools to achieve a pencil sketch of your image. The interface of the program is plain and simple. You can import a picture by using the file browser only, since the "drag and drop" method is not supported. Batch processing is not allowed. So, can preview the picture,

make it lighter or darker and with less or more details, and initiate the task by pressing the "Draw Sketch" button. Furthermore, you can change the image size and line width, use an eraser and modify its size, as well as enable PhotoS to constrain proportions. Once you are satisfied with the results, simply save the image to file by specifying the destination, filename and format (e.g. JPEG, GIF, PNG, BMP). The simple-to-use program has a good response

time, quickly finishes a task and includes a brief help file. However, it runs on a massive amount of system resources and doesn't show excellent results regarding the quality of the sketches. Plus, the interface is outdated and you have few features at your disposal. We suggest you look for something more advanced than PhotoS. Photoshop
