1. Field of the Invention The present invention relates to an intake vacuum controller for use in internal combustion engines. 2.

Description of the Related Art Various types of intake vacuum controllers which are switchable between an idle mode and an active mode have heretofore been known as intake vacuum controllers for internal combustion engines, as disclosed in Japanese Patent Unexamined Publication No. H1-284559 and Japanese Patent Unexamined Publication No. H11-17921. The intake vacuum controller disclosed in Japanese Patent Unexamined Publication No. H1-284559 includes a spring and a magnet, and energizes a throttle valve in an idle mode so as to hold the throttle valve closed. The intake vacuum controller disclosed in Japanese Patent Unexamined Publication No. H11-17921 includes a float chamber of an air-fuel mixture to be supplied to a combustion chamber. The throttle valve is closed in an idle mode so as to suppress the filling of the float chamber. However, if the spring for the idle mode in the intake vacuum controller disclosed in Japanese Patent Unexamined Publication No. H1-284559 is insufficient or has an excessively high spring constant, the vacuum in the idle mode cannot be sufficiently held. If the spring for the idle mode in the intake vacuum controller disclosed in Japanese Patent Unexamined Publication No. H11-17921 is insufficient or has an excessively high spring constant, the float chamber cannot be sufficiently filled. The present invention has been made in view of the foregoing circumstances, and it is an object of the present

invention to provide an intake vacuum controller for internal combustion engines which can appropriately set a spring load or the pressure of a working fluid in each mode of the intake vacuum controller. To achieve the above-mentioned object, an intake vacuum controller for internal combustion engines in accordance with the present invention comprises: a body member having a vacuum-introducing conduit defined therein and a pressure-reducing conduit defined therein through which a vacuum in an intake port is introduced into a vacuum chamber of the body member and the vacuum is reduced by a pressure-reducing valve; a working-fluid introducing conduit defined adjacent the vacuum-introducing conduit; a spring for biasing an opening degree of the pressure-reducing valve; and a switching device which controls the opening degree of the pressure-reducing valve by the spring being energized. The working-fluid introducing conduit communicates with the vacuum-introducing conduit via a pressure

Q: How to write a code in java, I have three variables which store the names of the days of the week. eg: `String[] d1,d2,d3; d1=new String[]{"Monday","Tuesday","Wednesday","Thursday","Friday","Saturday","Sunday"}; d2=new String[]{"Ap","Ma","Ti","Vi","Sa","Su","Sr"}; d3=new String[]{"Mon","Tue","Wed","Thu","Fri","Sat","Sun"};` Now I want to write a program to print these variable as the same as it is in English. order. I know it has something to do with arrays and I want to use strings instead of char as it's a variable length. ```
String[] days = { "Monday", "Tuesday", "Wednesday",  
"Thursday", "Friday", "Saturday", "Sunday" }; // Print the seven  
days of the week. for (String day : days) { System.out.println(day);  
}
```

Once you understand this, you can see how you might generalize this to any number of days. Facial Trauma: The Impact of Local Anatomy and Reconstruction Technique on Soft Tissue
