Determination of acyl glucuronides of polycyclic aromatic hydrocarbons in sewage sludge and soil by capillary electrophoresis after an ultrasound-assisted extraction process.

The application of ultrasound to the extraction of acyl glucuronides (AG) from solid samples was studied for the first time by capillary electrophoresis. This study aimed to optimise the main steps involved in the total method for the analysis of AG from sewage sludge and soil samples, including ultrasound-assisted extraction (USAE), precipitation/dissolution, clean-up and capillary electrophoresis separation and detection. Four parameters were optimised: time of extraction, ethanol concentration, the use of chloroform as extraction solvent and sample pre-dissolution. The optimum parameters found were: 30 min extraction time, 4 mL of absolute ethanol, 2 mL of chloroform, 30 min pre-dissolution time and 30 min separation time. The method was validated for determination of AG in sewage sludge and soil samples by measuring recovery and precision. The recovery values obtained for AG ranged from 86.9-104.3% and RSDQ: Windows 7 and Acer Aspire 6930G How to install Ubuntu? I have an Acer Aspire 6930G, Windows 7 Home.
