Although Photoshop is relatively new, its appeal and importance have grown exponentially. Photoshop has made editing images much easier because you no longer need to buy or use expensive off-the-shelf software. (For more on image editing, check out Chapter 18.) The key to any image-editing skill set is a good foundation in basic photo-retouching skills — you can't edit an image if you don't know what you're doing first. Try this book's *Photo Retouching For Dummies* (Wiley) first and you'll quickly get the basic photo-retouching skills you need. You don't need to be an expert at using Photoshop yet. Photoshop allows you to perform multiple operations on a digital image — no matter what type — so you can edit any photo to transform it into something else. Some people edit photos in batches, layering the different kinds of edits and effects, to save time and create interesting combinations later. Others edit just one or a few at a time. Each editor creates a new composite layer that enables you to work on the image again and again. After you create a new layer, you can edit it, clear it, make it transparent, have it move to another layer, or do other things with it. You can save your work as a file that can be exported, saved, and printed. Photoshop saves layers in a collection of folders, called `_layers_` that retain the state of the original image. It's important to note that the Photoshop file format is an uncompressed file of all the image components; it's not compressed, such as in JPEG. In the following sections, I show you how to get going with Photoshop and how to make some sophisticated edits. I also show you common retouching and photo-editing tools you'll use repeatedly. Getting acquainted with Photoshop isn't difficult to learn, but it certainly isn't easy either. Be patient when you open your first file and don't panic if the hard drive spins up as it loads an image; the geeks can take a long time to load images. The more you use Photoshop, the more familiar you become with its tricks, and you'll find it much quicker to work. Use the help features, such as the Adobe link in the left column, for tips, tutorials, and the best shortcuts, and don't be afraid to experiment. (Chapter 10 offers tips for managing Photoshop files.) As you can imagine, an entire

A multi-million-dollar raft of property restrictions is set to come into effect, in the wake of the State Government's decision to ban onshore oil and gas exploration. Key points: Restrictions on land can only be put in place in the narrow time-frame after a land title is registered Residents and businesses in outback Queensland say they are concerned for the long-term prosperity of their towns Residents and businesses in outback Queensland say they are concerned for the long-term prosperity of their towns All land titles in Queensland now registered under Land Court, but restrictions on land can only be put in place in the narrow time-frame after a land title is registered The restrictions were introduced in the last Land Court week of March, but only came to light this week because of a clarification by the Premier. Restrictions on property can only be introduced into the Land Court Register up to 48 hours after a land title has been registered, in order for the Land Court to consider the application for the restrictions. But before the Land Court can act, all land titles in Queensland must be registered in the Land Court. Residents and businesses in towns where drilling sites are proposed have said the restrictions, which apply to all of Queensland's vast land mass, are limiting their ability to grow and prosper. Andrew McDonald who owns a land title near Quilpie, north of Townsville, is frustrated by the Government's decision. "It's a very frustrating situation, because as a land owner you are looking for a long-term investment for your retirement, for your children, for your grandchildren," Mr McDonald said. "Now, if I've invested in that land for 20 years and I can't use it and hopefully, I might make a sale in the future." Land owners can apply for restrictions on what activities can be undertaken on their land, although there are restrictions on specific activities. The rule can only be introduced up to 48 hours after a land title has been registered. ( ABC News: Simon Mourgos ) Landowner can't lose title after application Professor Mark Kanazawa, from the University of New South Wales, says the restrictions are a "good thing". "We have never seen the introduction of property restrictions in this way before, and it's pretty exciting," he said.

In the construction of concrete buildings, it is customary to support structural steel members, such as I-beams, vertical supports or the like, with concrete poured into an opening in the floor of the building. It is desirable to have a concrete form which is capable of receiving the structural steel members within the opening and then setting the concrete material within the opening after forming of the concrete. In most instances, the form is disposed with a top surface that is at the same elevation as the top surface of the structural steel member. Thus, once the opening for receiving the structural steel members is formed in the floor of the building, the concrete material is poured into the opening and the form is then removed to leave the structural steel members embedded within the concrete. The structural steel members have a top surface which may be planar, concave, convex, curved, arcuate or other configurations. In the pouring of concrete into an opening in the floor of the building, the concrete is poured, using a form, through a top opening in the form. When the concrete is in a state of flow, the form is then removed to leave the poured concrete within the opening. In conventional practices, the form has a top opening which is at the same elevation as the top surface of the structural steel member to be used in the pouring of the concrete material. When the form is removed from the structural steel member, the concrete surface which contacts the structural steel member is at a level which is about the same as the top surface of the structural member and may thereby result in undesired wrinkling of the concrete upon the structural steel member. In many instances, this wrinkling requires a skilled craftsman to smooth out the concrete so that a smooth surface is provided on the structural steel member. In the convention practice, the form also has an opening which is slightly higher than the top surface of the structural member to be used in the pouring of the concrete material. This results in a form surface which contacts the concrete which may be provided on the form at the same elevation as the top surface of the structural steel member. Thus, the form surface provides a high and relatively smooth concrete surface when the form is removed from the poured concrete and when the form is removed from the structural steel member. In conventional practice, an attempt is made to provide the highest flow of concrete through the form. The form is removed from the poured concrete structure and is moved towards the structure. Thus, in removal of the form, the form is moved to a position where the first portion
