AutoCAD allows the user to get newer versions of AutoCAD that include new features and new tools. It also allows users to upgrade to higher versions of AutoCAD for free. Licensing In the past, AutoCAD used a subscription licensing model where a certain number of "hours" of use (one hour being defined as one keystroke) was associated with the license. This changed in 2007, when Autodesk announced that it was abandoning the license model and replacing it with a per-seat licensing model. In this model, the product is fully licensed, and not subject to a license key or a subscription. Computer simulation In AutoCAD, computer simulation refers to the use of a mathematical model as the means of solving a problem. Most simulation problems can be modeled with the use of finite element analysis, or finite element method. Finite element analysis is one of the tools available in the standard build of AutoCAD and can be used to create static or dynamic models. Static models are used to predict the outcome of events that cannot change in time. Dynamic models are used to predict the outcome of events that do change in time. As an example, if a static model is created to predict the stress distribution in a structure, then the structure will be instantiated using virtual
