Download Robot Structural Analysis Professional 2014 32 Bit (x86). free software. Soft32.exe. Autodesk Revit Structure. This weekend, Tesla released its 2017 Annual Report and I have to say I was a bit underwhelmed. In fact, in the 8-page report, Elon Musk only spends 3 sentences (or half a page) on what should be the most important topic of the year for Tesla: their production line. Over the last 3 years of reporting, Tesla has released highly detailed information on its past, current and near-future production capacity, but this year has left us with little to no information on how many Model 3's will be built this year. Here's a summary of Tesla's 2017 Annual Report: The 2017 Annual Report focuses on the year past, with a brief look at the year ahead and an introduction to Tesla's new products and services. In 2016, Tesla produced more than 55,000 vehicles, and Tesla expects this level of production to increase to 70,000 vehicles in 2017. Tesla plans to build, by end of this year, all available Model 3 cars to reach their full (lower-cost) target range of \$35,000-45,000 USD. Part of Tesla's strategy to increase volumes is to increase the number of lines to increase production capacity. In addition to Model 3, Tesla will continue to develop electric cars for commercial and luxury markets. Tesla will be opening a new assembly line for the Model Y crossover near their Reno, Nevada, production plant. This new line has been in the works for a while and seems to be delayed. Tesla is still experimenting with several new technologies in all levels of manufacturing. As a result, the company hopes to achieve even more efficiencies and cost savings in the future. Another new product that is expected is the Model Y crossover. But as of now, the vehicle seems to be very much in the development stage. The company has finished the first prototype and is currently working on the second prototype. It is expected to start production in the mid-to late-2020's. I did some reading on the internet and found two different articles and videos about Tesla's 2017 Annual Report and here's what I found: 1. Tesla Shares Higher After Annual Report Release 2. Tesla Announces 2017 Annual Report 3. Tesla Taps Saudi
