of the journey, we had an interesting and unexpected collection of TV stars, including Peter Capaldi, Bill Nighy, and Bill Bailey to name but a few. As I'm writing this, I can't help but be struck by the amazing legacy that's been created in the last few years. The conference is all about the future, so it only seems fitting that we're heading into our 50th year. But what a ride! And we're just getting started.

SIRATION: A new classification for the indications for endovascular treatment of intracranial aneurysms. To identify the factors that affect the outcome of endovascular treatment of intracranial aneurysms. A retrospective analysis of unruptured and ruptured intracranial aneurysms treated by endovascular means at the National Center of Neurology and Neurosurgery, Mexico City, between 1995 and 2007 was conducted. Endovascular treatment failure was defined as recurrence of aneurysm and rupture or progressive growth of aneurysm at follow-up.

Multivariate regression analysis was used to identify the parameters associated with treatment failure. A total of 290 aneurysms treated by endovascular means were included in the study. The angiographic success rate was 95.2% (264/280). The intraoperative technical success rate was 89.3% (54/61). The clinical success rate was 90% (215/239). The mean aneurysm size was 6.4 mm (range 2-13.2 mm). The mean follow-up period was 31.6 months (range 6-70 months). Overall retreatment rate was 4.1% (12/290).

Endovascular retreatment was performed in 11 aneurysms. The rate of retreatment was 4.7% (2/44) for aneurysms less than 6 mm, whereas it was 0% (0/8) for aneurysms greater than 6 mm ($P = .03$). Of these 11 aneurysms, 7 were in patients with subarachnoid hemorrhage and 5 were in patients with a poor clinical status. There was 1 treatment-related complication (2.2%). Endovascular treatment of intracranial aneurysms was effective and safe. Endovascular retreatment was most often needed in small aneurysms less than 6 mm or in patients with a poor clinical status.

It did change the LUKS public key to a new hash, but the current LUKS key does not match the old public key on the drive. Welcome to our Blog Latest News & Updates Hot Topics Charles van Commenee House The Charles van Commenee House is a historic house at 555 Main Street in Chepachet, Rhode Island. Built in 1847, it is a fine local example of Federal style architecture. It was listed on the National Register of Historic Places in 1985. Description and history The Charles van Commenee House stands in the village center of Chepachet, at the southwest corner of Union and Main Streets. It is a 2-1/2 story wood frame

structure, with a gabled roof and clapboarded exterior. The roof is a broad 2-1/2 story gabled ell that extends to the rear. The main facade is three bays wide, with a center entrance sheltered by a half-round transom window. Flanking that window are sash windows with rounded-arch tops, all topped by half-timbering. The side gables are studded with paired dormers, and there are single-story hip-roofed dormers on the front and rear of the ell. A two-story ell extends to the rear of the main block. The house was built c. 1847 for Charles van Commenee, a local physician who also built the nearby Rice House to resemble this building. From 1848 to 1851, Van Commenee was also president of the Chepachet Bank, and in that time the house underwent a major face-lift, most likely to help him look more like a banker than a doctor. The house served as his home until 1857, at which point it was sold to the brothers of

architect Calvert Vaux, who was living in nearby Greenwich. At that time it underwent a further face-lift, and soon after it was bought by the family of Henry Augustus Coombs. Coombs was owner and developer of the estate's port properties and 6d1f23a050
