Whole Tomato Visual Assist X 10.9.2258.5

A: Those paths show the files that were downloaded by VS2015 when you installed it. If you want to change them you can do so using regedit. However you should make sure you don't mess with the .vs folder. See this answer for a little explanation and details on how to manipulate those settings. Microsoft Visual Studio 2015 installation folder: \Program Files (x86)\Microsoft Visual Studio 14.0 (Windows 7, 8, 8.1, 10) .vs path: %localappdata%\Microsoft\VisualStudio\14.0\Common7\IDE\ (Windows 7, 8, 8.1, 10) A: I have suggestion of adding one more setting to Visual Assist settings. Now I can connect Visual Assist with source control tools using TortoiseGit(TortoiseSourceControl, TortoiseGitExtensions) as shown below In TortoiseGitExtensions you can turn on/off option to sync current VisualAssist workspace May we refer to the MOST BRIGHT Sun... (smile) It's been known for quite a while that stars are born, not die. We're talking about old stars. They can last millions of years, but they die eventually. Our Sun could live forever for a few thousand years, but at some point it will die. Its outer planets can crash into it and cause extensive destruction, which could render the entire Solar System uninhabitable. What's interesting is that, to completely destroy the Sun, the star would have to run out of nuclear fuel. It would slowly cool and shrink, and eventually become a white dwarf that glows with the faintest of lights from its decay heat. It would be nearly as hot as the Sun's interior, but smaller. It would slowly blink out. So maybe in another billion years, the Sun will die. But this is only possible if the remaining reserves of nuclear fuel don't run out before then. But there could be a very, very unusual way for the Sun to live for millions of years. It could survive nucleosynthesis. The most likely candidate for this ultimate longevity is helium. Helium is a very common element, so it's not a c6a93da74d
