Thank you very much @Archer110 for the link A: How exactly are you verifying that the files are broken? Do you see any error messages? If so, paste the full errors into your question. As for the issue on the other hand I don't think you need to do anything special, the files where created and split by the copy-pasting function of the website, so that I'd say it's the website itself that is broken. Q: How is this partitioning in union-find very different from the one I've seen before?

This is part of a question about How I would implement linear progression. The puzzle is here. In the first version I am very confused by the way this problem is split. Part one is finding the neighbors. In the first version I'm not really sure what they are doing there. I know they are looking at items 0,1,2,4,5, and 6. If you pick item 1 as your pivot, you'll find that 0,1,2, and 4 are connected to 1, and 3 and 5 and 6 are connected to 0. The idea is that the array has been partitioned

---

into two sets, as if you were painting a graph with items 0,1,2,4,5,6 on one canvas and items 3,4,5,6,7 on the other. In part two, they are using the coloring algorithm. So part two looks fine. I would just modify part two to return the two sets. The problem with the second version is that when I partition the array into those two sets, I get a much different result than what I get with the first partitioning. I don't understand how that should be possible. I've confirmed that there is a flaw in the first version (of course, there always is!) because I have discovered that my two subarrays are the same. How is this partitioning in union-find very different from the one I've seen before?

A: As I mentioned in the comments, the failure is that the code doesn't handle the case in which no item in the array is already colored. The union-find process goes something like this: Start with a single root element. If the root element is already colored, go to 1. If the root element is not yet colored, find the smallest item in the array that is already colored
