rdio is an online music streaming service founded in 2007. it is one of the few that allows users to subscribe to a la carte, rather than a la carte. subscribing to a la carte music services like pandora, spotify, or rdio, means that you don't have to sign up for all of their services. instead, you sign up for one, pay for it, and that's it. you won't have access to any of their other services. you can enjoy the music as you want to, and when you want to. it is also one of the few that offers unlimited streaming and downloads. with itunes, you can play aac and mp3 files in quicktime player and imovie. you can download files to your hard drive, and you can burn cds. like other music programs, itunes will play mp3 and aac files. you can also rip cds to your computer or burn them to a cd. amazon music is a digital music service and online marketplace by amazon. you can download your music to your computer, or stream it to your amazon music app on your smartphone, tablet, or computer. you can also use amazon music to stream to any device with an amazon account. the amazon music app also includes a recommendation engine that will help you discover new music. new artists and albums are added to the service every day. the distortion of sound is a documentary featuring artists and producers such as quincy jones, hans zimmer and slash, expounding a powerful argument against the consumer driven culture of highly-compressed music. as an (albeit much less prominent) musician i couldn't agree more. the hours of painstaking labour attached to crafting unique sounds designed to elevate the consciousness of the listener is an effort that, to modern music listeners, seems lost, replaced instead with convenience and portability. the average mp3 file your computer holds will be around 3-4mb per song, however an uncompressed file (see wav or flac or aiff) could be two, three or four times the size.
