COPYRIGHT: Power & Revolution is a free program distributed under the GNU General Public License (GPL). You are free to use, modify and copy it, so long as the copyright notice is preserved (see end of file).

However, Power & Revolution should never be distributed in unedited form; as a source of ideas for the development of your own simulation, or as a game in itself. UNIQUE SYSTEM: Power & Revolution is optimized for the GMCT Opteron 6235 (Dual Intel Xeon 6235, CPU clock up to 2.9 GHz). It should run on any decent (rather than old) PC with the same hardware.

The selection of qubits is done for you by the

Geopolitical Simulator, based on your specifications. Furthermore, the user can freely choose and configure the desired number of qubits for the performance. The selection algorithm ensures that a sufficient amount of qubits are used for the best overall performance (which may be lower for more qubits) and at the same time the minimal number of qubits is used so that the simulation can be finished in a reasonable time. Price: USD 59.99 euro 66.99 euros. How to buy? You can buy Power Revolution directly from our website. You will be charged with your country's national currency and pay with a credit card or paypal. Payment is secured by SSL encryption. Even before the first quantum computer was built, there was a strong interest in the simulation of quantum systems. Prominent examples are the study of conduction electrons and lattice vibrations in semiconductors, excitons in semiconducting quantum dots or the electron spin resonance of organic molecules. The simulation of such systems at the physical limit of classical computers using the Monte Carlo technique is highly

challenging, especially in view of the physically rather difficult parameter ranges. With the aid of a quantum computer, the simulation of these quantum systems becomes both feasible and affordable.
