I also set a value of 1mm for the height of the cutter in both the 2D tool and the 3D tool. I would suggest setting this to 1mm. If you like, you can create a separate configuration file with a more accurate value for your material thickness. You will need to remember to open the configuration file if you change the value. You can also open the cut2d file and change this value without reopening it. Cut2D comes with more than 20 materials, six layouts, and 4 types of machines (including laser and rotary) and allows you to save multiple designs and documents to access them later. Once created, every tool has a customizable and even editable cutting stream, so you can tailor this to your needs. The program includes a full range of post-processing tools such as beveling, overlapping, fusing, polishing and sanding. The 'Kickstarter' wizard also allows you to focus on your specific needs, by being

able to customize the CAM environment, cutting speed, offset, and inputs. The material you choose to use affects how the cutting will be performed. For example, for denser materials, Cut2D will be able to compensate for the typical lower feed rates. In general, Cut2D will perform a relatively good job, even for relatively complex shapes without any specific tuning. Let's begin by explaining this in a little more detail. The base of Cut2D is a user interface that allows you to import DXF files into Cut2D and export cutting files to various formats. Vectric include over 20 materials and 6 layouts included with the program. Each material has a unique speed, offset and tool diameter. Materials such as glass, steel and even metal can have speed settings which will make it easier to cut corners on larger, thinner metals. To help keep your cutting files uniform it is recommended to use the laser, rotary or mill. As a first time user, Vectric have included an Auto button which makes this process fairly easy. All of these settings can be exported to a cut2d.cfg file which is included with the installation package. On the right-hand side of the screen you'll see a few more buttons to make modifying the settings a little easier.

In order to use the technology of this product, you must first review and agree to the terms of use. Vectric Vcarve PRO is proprietary software that is protected by copyright and other intellectual property laws and is the sole property of Vectric LLC. Vectric VCarve PRO is licensed to you by Vectric LLC and may be used only by you in accordance with the terms of the terms of use. Available as both of CNC routers and milling machines, Vectric CNC can be used to work with and cut any shape imaginable. The software is easy to use and provides sufficient tools to get you started on a specific project. Vectric CNC supports most of the standard Vectric VCarve and Vectric Cut2D tools. If you want more advanced functionality, the software is also compatible with all of the other Vectric products such as Vectric Gantry and Vectric Vray. While most people choose to use Vectric on their local CNC machine, the next logical step is to buy and install a CNC router on your home network. There are many reasons why you should consider a CNC router as opposed to cutting on the CNC machine of your local workshop: the price, speed, accuracy and interactivity. We are a remote software company, not a company with a workshop. As

such we have the freedom to buy expensive equipment, make it work for you, fix it if it doesn't, and keep doing so. We have the most powerful remote router on the market, which is why we ask you to buy it from us. The router is built from the ground up to be network-capable and has a friendly interface for remote control using Vectric's control panel, VNC viewer and our free control panel app. 5ec8ef588b
