What's New In AdvancedRun?

"AdvancedRun is a tool that simplifies the work with Windows. With one click you can run applications with more advanced settings, priority classes and compatibility modes". I'm sure you have already used many tools to get some of the more advanced settings that Windows offers you, but with AdvancedRun you can easily get them all in one go. AdvancedRun Features: AdvancedRun is a tool that simplifies the work with Windows. With one click you can run applications with more advanced settings, priority classes and compatibility modes. AdvancedRun lets you change CPU affinity mask, set priority classes for running programs and run them with compatibility modes for older versions of Windows, different users and with different privileges. With AdvancedRun you can easily get more than what Windows normally offers you when running programs, so what are you waiting for? Download this tool for free today and try it out for yourself! For a while now, Windows has been offering its users sufficient methods of running apps by enabling them to tweak settings like system compatibility modes and others related to basic video. If you want more, you are left with two obvious options: if you have the necessary skills, you can practice some advanced computer ninja moves using the Command Prompt or turn to a software solution that expands your OS' capabilities for

running apps, such as AdvancedRun. This is a pragmatic and useful piece of software that allows you to run programs with different and more advanced settings than you usually could. Advanced settings to run apps, within a simplistic window The application is not designed to win any beauty contests, but it does feature a straightforward user interface with a single window, which makes it somewhat accessible even for the most inexperienced users out there. As expected, the utility enables you to run any app using specific environment variables, command-line arguments and it even helps you choose the start directory for the program. You can also set affinity masks and appoint the exact core of your computer's CPU that the current program should use. Priority classes and system compatibility modes settings at your disposal No surprise here, as AdvancedRun makes it possible for you to run apps in Normal, Idle, High, RealTime, Below Normal and Above Normal priority modes. In addition, you can set the program's main window state (Normal, Hidden or Maximized and Minimized), as well as its window position and its default size, considering that the app offers you these options to begin with. Furthermore, you can run apps in compatibility modes for older versions of Windows, with different users and permissions. What is more, you can disable visual themes and desktop composition, run apps in 640x480 resolution, turn off display scaling on high DPI settings and many others. Run apps with your custom settings with just a few mouse clicks You can save all your favorite settings into a configuration file to

System Requirements:

Windows XP or higher with DirectX 9.0 or later. 900 MHz Pentium III or equivalent processor. 300 MB HD space. Recommended System Specs: 1 GHz Pentium 4 processor or equivalent. 700 MB HD space. Linux support requires open-source Radeon drivers for 2D acceleration. These are available on most distros, but there are occasionally incompatibility issues with certain games. See below for more details.
