Please see the step-by-step instructions below to get Flight Simulator to work properly. Next, download and extract the archive to your desktop. In the extracted folder, you will find two files, FlightSim.exe and FlightSim.exe. Run FlightSim.exe and choose the "Native" option. You will be prompted to install the Flight Simulator. Click "Install" and follow the onscreen instructions to complete the installation. You may be prompted to restart your system. After restarting your system, you should now see the flight program, either via the Start Menu (if you have Windows Vista or later), or the Taskbar (if you have Windows XP or earlier). Once you have opened the Flight Simulator, click on the "... " icon to open the Flight Simulator menu. Choose the

"Options" tab. You will see two options in the General category. The default is "Transparent Background and GDI Fonts." If you have any problems seeing GDI fonts, choose "Anti-aliased GDI Fonts." Click on the "Options" tab again. You will see "Menu Mode" in the Menu tab. Choose "Normal" if you want the menu to appear like in Windows. This theme offers three backgrounds (one for each scenery), and two skins (one for each scenery). Right click on the "Scenery" button to change the available scenery. Each of the two skins is available for the two available scenery (Hawaii and Oahu). When you are done, click on the "Close" button to exit. You can now return to the Flight Simulator. Note: If you are running Windows Vista or later, you may not see the "System" or "Help" menus, even if they are installed.
