Welcome to the March edition of What We Reading, where we discuss the books we've been consuming lately. In this month's edition, we discuss the book "Viral Spiral" by Robert Llewellyn and Greg Sestero. The book was recommended to me by a colleague and it has quickly become my favourite book about the world of security. The basics of a virus is quite simple. A virus is a program which attaches itself to another program without the latter's consent. Some viruses spread through e-mail, while others propagate by sending copies of themselves to other computer files. When a virus is in your system, it is able to start making modifications to your files, often writing extra junk information on your disk. The end result is that the computer begins running slower or even crashing. The book discusses the different types of viruses
