Today, the studio class is the system of choice for many freelance designers. They are usually working under deadlines and with a tight budget, requiring that they use the latest technology. This recent rise in popularity of Microsoft Surface, Apple iPad, and other tablet devices indicate the success of these radically inexpensive computers in the market. They have established a presence in the landscape and are increasingly used for drawing and sketching. Sketch comes only as a native iPad app, but it is perfect for the design studio. In Apple products, the pencil is the most capable of all, and the iPad Pro and its Apple Pencil are no exception. This new drawing application can help its users become creative and productive, precisely because it takes advantage of a tablet device's interaction mechanisms. The application allows you to draw over existing images, layer your composition, use various brushes and work with layers. Also, you have the power of undo, redo, and re-edit. You can retouch the image, erase unwanted elements, and convert it to a vector format. Lightroom 5 has no new addition of any truly important aspect of the program. You still get a six-year overview of where you have been and where you want to go. However, a great number of new features have been developed using Adobe's AI (Artificial Intelligence). These AI features allow the software to suggest edits and actions based on your current mode. With AI, Lightroom 5 has learned from your behavior over the years and will suggest new ways of handling tasks for you.
