These systems are sometimes referred to as deep learning. AI and deep learning-powered systems are very different from one another. AI, machine learning and deep learning represent much more than just great capabilities at computing. They represent a shift in how we think about solutions to various problems, which has opened up new vistas of potential use cases for Photoshop and other applications. In fact, today AI and deep learning are reshaping industries in big ways. Traditionally, Photoshop was focused on visual (image) data, but now with the combination of AI and deep learning, we can now tackle the power of machine learning to learn not only what's in an image, but also who, where and what is in images. Applications are only the beginning. Deep learning will impact our workflows, creating highly automated and efficient processes. Within the next five to ten years, we believe deep learning systems will improve every aspect of our lives ushering in the Age of Destiny, from fashion, to personal healthcare, to self-service experiences. These new technology tools will usher in a golden age of automation.
