Summary: Photoshop is the original and still the best photo editor on the planet. Ideally suited for most photo editing needs, Adobe Lightroom offers tools to help you organize and manage your photos, making it perfect for beginners and pros alike. And if you want to move into the world of video, there are excellent tools available for that as well. In fact, it's tempting to say that Lightroom is the best photo editing package you'll ever use, period. For web designers, it's the solution of choice due to its strong Adobe-web workflow and built-in tools for rapid prototyping. Choose the category you'd like to be a part of, whether you'd like to be a part of the photos, video, or text category. Reorder items if you'd like them in different positions on the canvas. Select the Content-Clipping Show Levels (3) button to show all the content on that layer. **Then click on this button again to hide the layers.** If you'd like to show the clipping on that layer, then click on the Show Content button (4). And if you need to go back and hide the clipping... well, that's pretty easy to do, too. In this example, I'm hiding the watermark that I created at the beginning of the layout, using the crop tool on the Credit Card shape. But if I want to show it, I'd click on the Show Content button (4), click the Show Watermark button (5), and then click again on the Hide Credit Card button (6). To display the text correctly, click on the Word Wrap button (7), choose from one of the predefined paragraph styles or create your own, and type (or paste in) some text. And if you don't like what you see, as I don't, you can edit the style and put in your own font, color, and size.
