Like other image editors, Lightroom is packed full of editing controls. There are on/off switches for the tools, including Adjustment Layers; you can change color settings, crop, save, and more. There's also an extensive selection of creative filters, in addition to other tools, such as picture editor, heal, clone, stamp tools, and more. One of the most pleasant surprises in Lightroom 5 is that the app works fine when connected to a Mac. I only have an iPhone 6 and I've been using it to transfer images from my computer, using the Photos app, the Cloud Connector, and Fireworks. The app works reliably and provides options to join albums and move photos to portfolios. You can even use a USB connection to transfer the photos to your Mac. Overall I'd have to say that I was pretty impressed with Lightroom 5. It won't be a major change, just more of the same, but on the whole it fits what I need. With a little extra time, I'm sure Adobe could make some tweaks to make it even better. Don't let the name fool you. Pong Pro is not a super tournament game, but it's a tremendous game nonetheless. What it does is to make you feel like you're playing against a live person, and taking a controller to the face is always a decision you will question the next day. I've been using Lightroom for a while now, and I love that I can capture, edit and work on my images right within the application. That I can even link the app to the familiar Photos web service and work with my online albums is, in itself, a significant time saver. I also love the fact that I can now easily export my edited images to a series of 1-click web galleries. I have hundreds of images uploaded online and while I often work with them through online galleries like SmugMug, I often use other sites to display them. This new feature makes them accessible in an intuitive way through a new Drop Site.

The image above is from my friend 5-6 year old Desmond who took a photo of me sleeping and uploaded it to Facebook. I asked him what he was thinking about when he was taking the photo. He stated he was thinking about if I would like it. I of course said yes. He then said okay then what he did was he drew a face on me and he was the only one that knew that I would not mind that. It was so cute. He continues to grow up even at that age and is now a huge and talented artist. He likes to draw on everything he sees with his markers that he creates himself. The image above shows my client's hair in place for a new hair style. I created and placed a mock in a place where the client's hair wasn't yet ready due to a shortened schedule. In a matter of a few minutes this mock replaced the real in place hair perfectly. This type of manipulation is called photo retouching. It's the lighting you have to decide first of all then start manipulating the background and hair. It's a great way to become comfortable with more advanced techniques within Photoshop and still create images that are perfect. This image shows my client's face after she applied a cover foundation on her skin. After that she was allowed to go with a new hair style. The key in creating stunning artistic images lies in the perfect balance of the right lighting and shadows. I created this photo in One Hour beauty by getting the lighting just right and using a good cover foundation to match her skin tone. While Apple announced the ability to update iPhone Xs and Xr with the latest iOS (upgrade eligible) when it launched new iPhones, Adobe is still way behind, but at least its customers don't have to wait for the updates. Adobe now allows PS Pro customers to install a software update that gives them the feature, with no need to install the underlying OS update. The function is currently available in desktop versions of Photoshop CC from 22.0 onward, but PCMag says it's unlikely to work on Macs in the near future. **Adobe Creative Cloud** - When it was first released, Creative Cloud was a boon to the creative world.
