I've been reviewing Sonic Visual Splash since the first few versions after it launched in June 2012. It's a four-channel tire upgrade that offers a 4x lens reduction but only one channel of lens distortion correction (and no profile support), and it also lets you cheese the lens without looking through a viewfinder first. As such, it's more for casual shooters than pros. Right now, it's night time for me so I'm at home with the right apps on my laptop. However not always people have the time to have a separate computer to work on. That's when the iPad Pro really shines. This comes with both good and bad. As a creative, I'm getting creative with designs and concepts When it comes to using an iPad as a drawing tablet, digital artists have been unable to remain creative as apps released today to draw or paint on the iPad are not full featured and the use of a lot of tilt gestures are often missing, making it hard to create fluid lines. Apps like Procreate and Duik are a good start but no progress has been made in this space in a while, and there are still no widely used apps for the iPad that are very good for creating. Adobe Photoshop is the only app for the iPad that offers a comprehensive solution for drawing and painting, and it's the best one for the device. The app itself is extremely easy to use. Everything you would expect in a digital drawing app at this level is there and is built to be simple and intuitive. I can't draw at all but the iPad Pro is just fine if I need to. Less natural is drawing in a different hue of grey (grey being a key difference in Photoshop from the rest of the Adobe ecosystem). It's a draw from my experience, and I'd love to see Adobe make it more customizable.

Photoshop is a piece of software that can resize the size or shape of objects with ease and create very high-end photo with amazing effect that are unimaginable. It doesn't just add borders to a photo and make it look fantastic, it can make it seem way bigger, smaller, thinner, longer, and even create more than one realistic image on one physical frame. Adobe has also made significant changes in the way Photoshop handles content assets and is approaching "Photoshop Lightroom" as a 3D content toolkit for the first time. That means folks could make the full pixel spectrum from 2D to 3D media, from mobile to tablet, through a cross-platform experience. Photoshop is a well-known brand in graphic designing industry worldwide, and the demand for such software is always going to be high around the globe. The company has reported that Photoshop and other Adobe products had generated just over $2 billion in revenue in the past quarter alone and that nearly $2.4 billion of total annual profits came from Photoshop. This figure was more than Microsoft and Apple who were the second and third largest contributors to the company's fiscal profitability. This was the sixth consecutive quarter in which the company out-earned Apple and out-earned Microsoft for the quarter. The key takeaway from this data is that while other technology giants have increased their user base, Adobe has not. In fact, their user base has stayed the same. However, its profit and revenue increased significantly. This reflects that the demand for Photoshop products is never going to diminish and would continue to increase.
