Sharpening is a technique that makes one pea sharp, in case you'd neglected to notice. For as long as people have been taking pictures with a camera, there's been a desire to create the effect of a pea sharp. Now a new feature to Photoshop CC 2014, "Shadows & Highlights", lets users apply sharpening in one go to apply a "pea sharp" effect to just the highlights of an image. Sharpening is an important retouching technique because it's the first part of a workflow, before the images are even put on a JPEG compression profile, which is a key aspect of sharpening. What Shadows and Highlights does at a high level, is apply a specific amount of sharpening to the highlights of an image, while leaving the shadows less sharpened. The idea is that when working on the highlights, one would want the image to be as sharp as humanly possible, but less sharp when working on the shadows. This very basic understanding helps when trying to get the intent of Photoshop sharpening right, and in this case, more sharpening may help towards that goal. This powerful tool lets you manipulate the gradient effect in images using the same principles as traditional art painting. Vector graphics have long been acknowledged as the most cost-effective way of storing and representing data as a collection of shapes and lines. Vector images, like those found in logos or artwork, can be scaled and resized without loss of quality or clarity while maintaining the same crisp and clean appearance. The respective versions of the brushes found in Masking & Highlights, Dodge & Burn, Pinch & Pull and Smart Blur were all introduced in their corresponding editions as part of Photoshop's 2020 update. Additionally, the layer styles tool introduced with Photoshop CS5 now includes two new features: Paint Bucket, which lets you paint directly into a layer, and Layer Text, which lets you edit text directly in layers. The Blur & Sharpen tool was a key feature of Photoshop since its release in 1992 and is still one of the go-to tools for showcasing sharpness. Photoshop's new Lens Correction tool also covers the Blur & Sharpen function with its multi-analysis capabilities and direct controls to reflect the standards of today's camera images and effects. A new Lens Corrector feature prevents ghosting in focal plane when adjusting the focal length of the lens.
